

Hamza Jamal

Product designer working on activation, retention and the parts of a product people actually touch. Currently at ImagineArt.

ROLE

Product Designer, ImagineArt

BASED IN

Lahore, Pakistan

SELECTED WORK

Six projects, 2021 to 2026

ABOUT

I design with clarity, empathy and purpose.

I have built product roadmaps and worked with cross-functional teams across startups and companies for five years. Design, to me, is problem-solving with empathy. The best products make complex things feel effortless for real people.

Research over assumption.

Every screen starts with a real user problem. Interviews, support tickets, session replays.

Move the metric.

Activation, retention, conversion. If the design does not move a number, it is decoration.

Ship the boring parts.

Empty states, error states, edge cases, design systems. That is where the product lives.

Engineers in the room.

I pair with engineering from kickoff so what ships matches what was specced.

2026 TO NOW

ImagineArt
Product Designer

2024 TO 2026

Carbonteq
Senior UX/UI Designer

2019 TO 2024

Arbisoft
Product Designer

EDUCATION

BSc Software Engineering
UET Taxila, 2015 to 2019

Six projects where the outcome moved the metric.

01	ImagineArt Ad Studio	From a prompt bar and a stack of modals to a studio you can see, on web and mobile.	Consumer AI · 2026	p. 4
02	ImagineArt Captions	An auto-captioning tool that became the highest-intent front door into the video suite.	Consumer AI · 2026	p. 6
03	Ode to Beauty	A skincare marketplace made to read as a brand. Task completion in testing went from 27% to 100%.	E-commerce · 2024	p. 8
04	Walter's Hospitality	A twelve-month CRM that replaced spreadsheets, email and paper for planners, staff and vendors.	B2B CRM · 2023	p. 9
05	Advance Learning	An online school for the Saudi Embassy. Shorter sign-up, clearer dashboard, approved on the first review.	EdTech · 2022	p. 10
06	Xiangqi.com	Two lobby redesigns for an online Chinese chess platform. Conversion went from 1.79% to 11%.	Gaming · 2021	p. 11

Rebuilding Ad Studio around what people could see

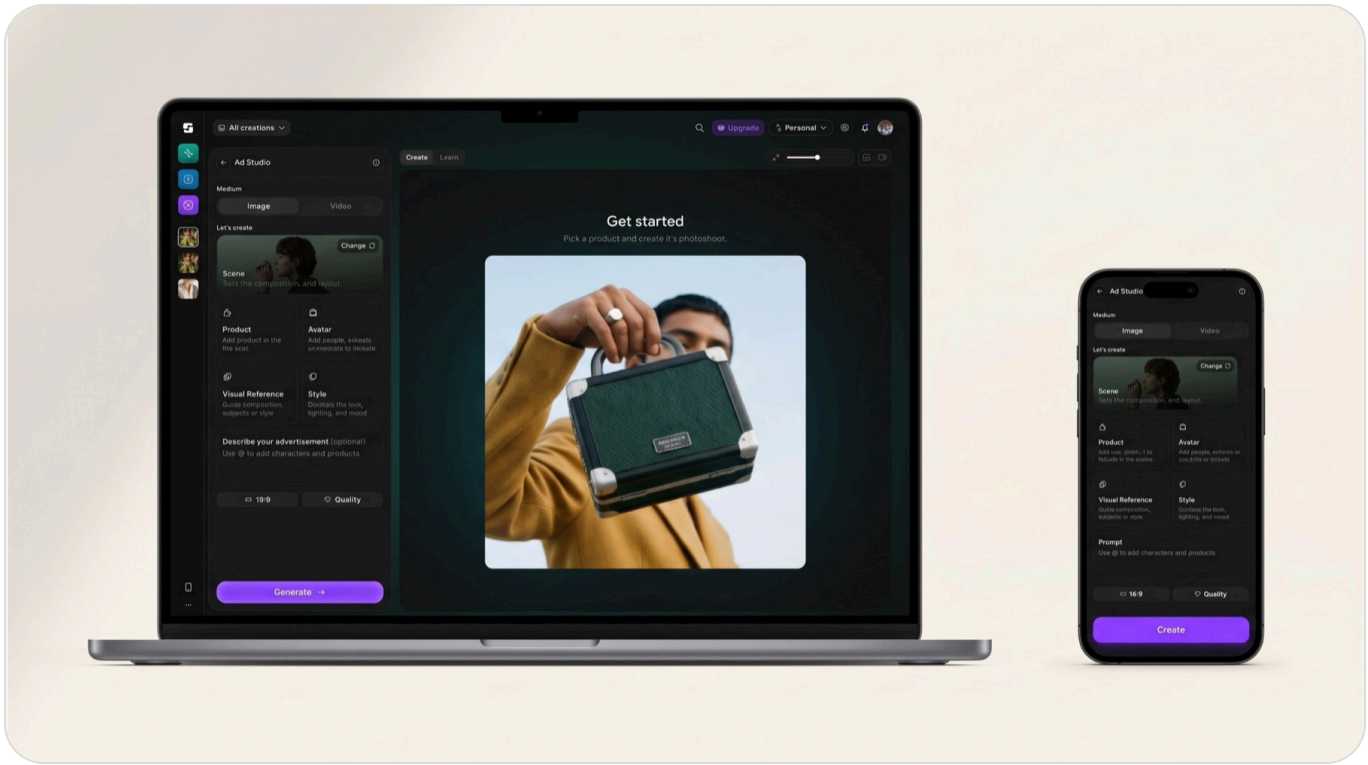

ROLE	TEAM	WHEN	CONTEXT
Product design, analytics review, mobile, hand-off	PM, two engineers, growth specialist, QA	July to September 2026	Live product with over a million users

THE PROBLEM

Ad Studio launched as a prompt bar with a few hidden buttons. The brief said the AI was letting people down. The failure log said the interface was: nine in ten failed generations were a plan gate or an empty prompt.

WHAT I DID

- Read every failed generation in Mixpanel before opening Figma. One table replaced the brief.
- Replaced the prompt bar with five cards: Scene, Product, Avatar, Reference, Style. The prompt became optional.
- Rebuilt mobile as one scrolling screen, with the plan gate shown before Generate, never after.

The same five cards on web and mobile.

81%

Paid generations that succeed, from 69%

8x

Weekly users after opening to Free

9 in 10

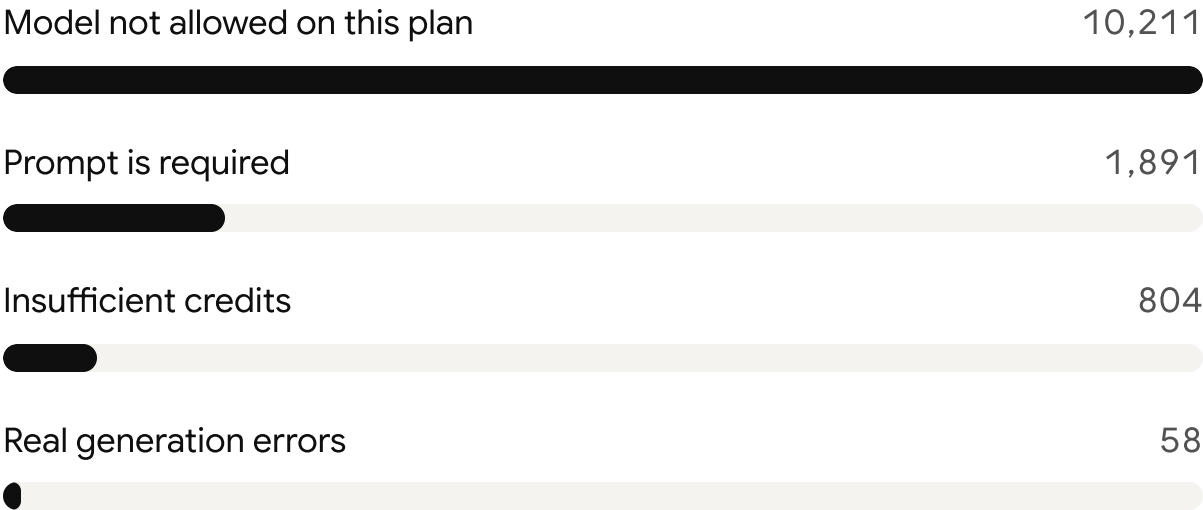

Failures traced to two fixable causes

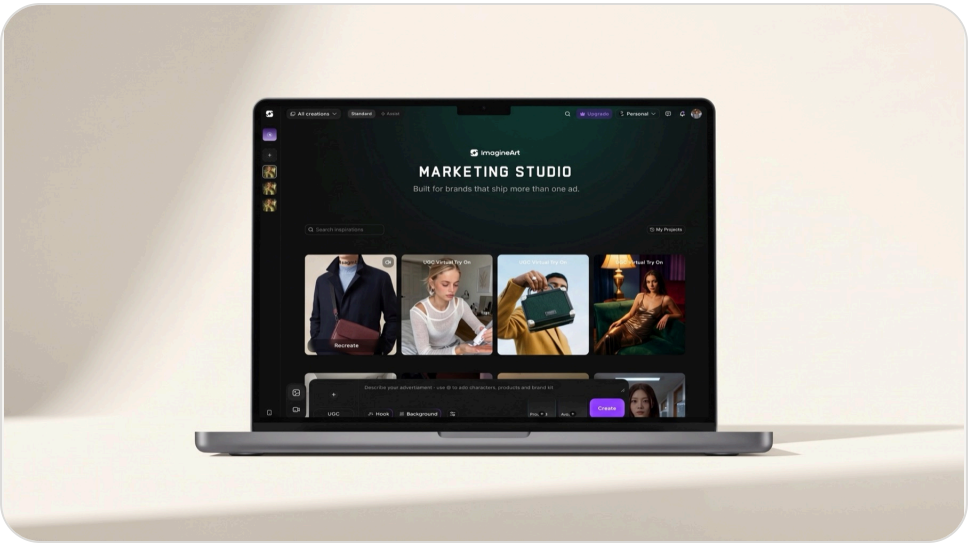

Full case study · hamzajamal.design/work/ad-studio

What the failure log changed

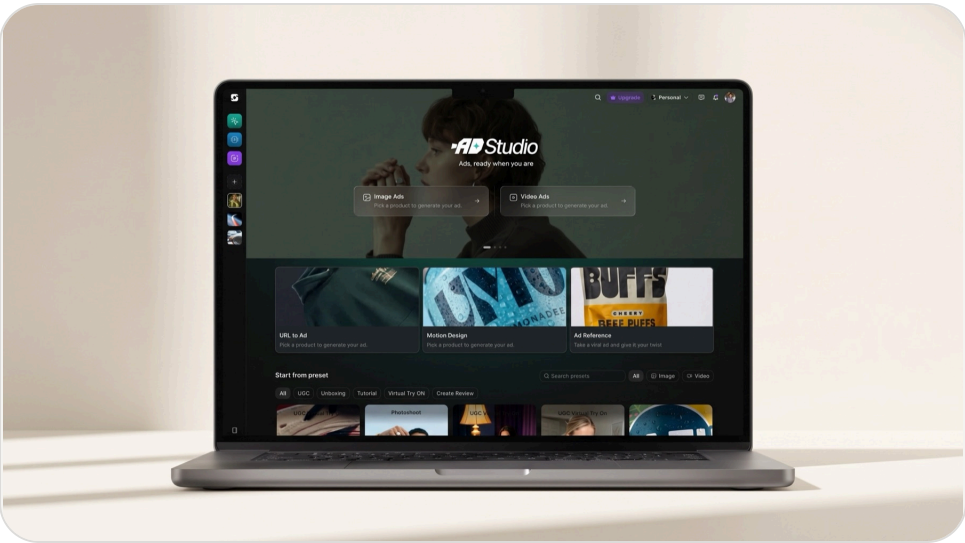

WHY GENERATIONS FAILED, JUNE TO SEPTEMBER 2026

Failed generations in Mixpanel. Staff and test accounts excluded. Real model errors were under sixty across four months.

Before. A prompt bar and two plus buttons.

After. Scenes, products and presets you can see.

Read the failures before you draw.

The biggest fix in this project was not a layout, it was a table, and I nearly skipped it.

Volume is not health.

When Free users came in every chart went up and the product felt worse. Success rate was the only number telling the truth.

On a phone, the screen is the funnel.

Anything that did not fit on one screen was something to cut, not something to hide in a modal.

Captions: the easiest tool in the video suite

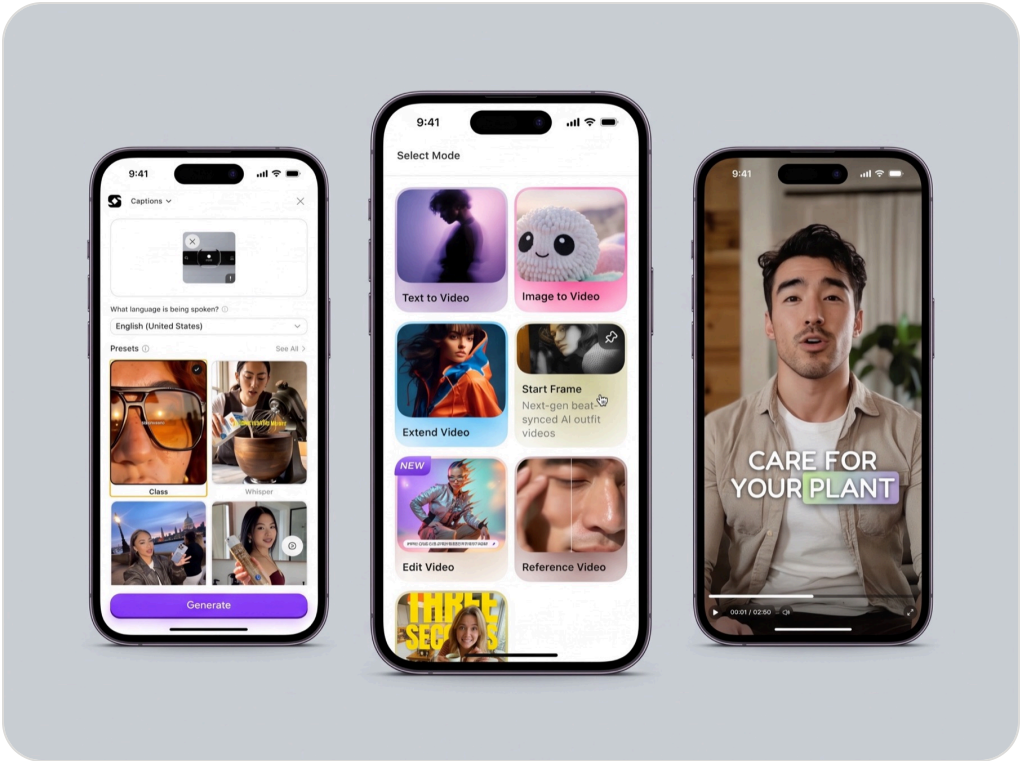

ROLE	TEAM	WHEN	LIVE
Product Designer: research, design, tracking	PM, engineers, the in-house creative team	2026, live since July	imagine.art/video/captions

THE PROBLEM

People search for captions by name, so the tool had to feel simpler than everything else out there. One rule: as few steps as possible. The hard part is accuracy. Nobody notices a hundred right words, everyone notices one wrong name.

WHAT I DID

- Used a competitor start to finish before drawing a screen, to feel where people slow down: settings and wrong words.
- Made every style a real picture with captions on it, chosen with the creative team. Word by word highlight on by default.
- Instead of a timeline editor, a word swap: type the right word, say which word it replaces, run it again.

Pick a style, find it in the video menu, get the clip back captioned.

2,073

Visitors in the first eight weeks

72%

Made a video

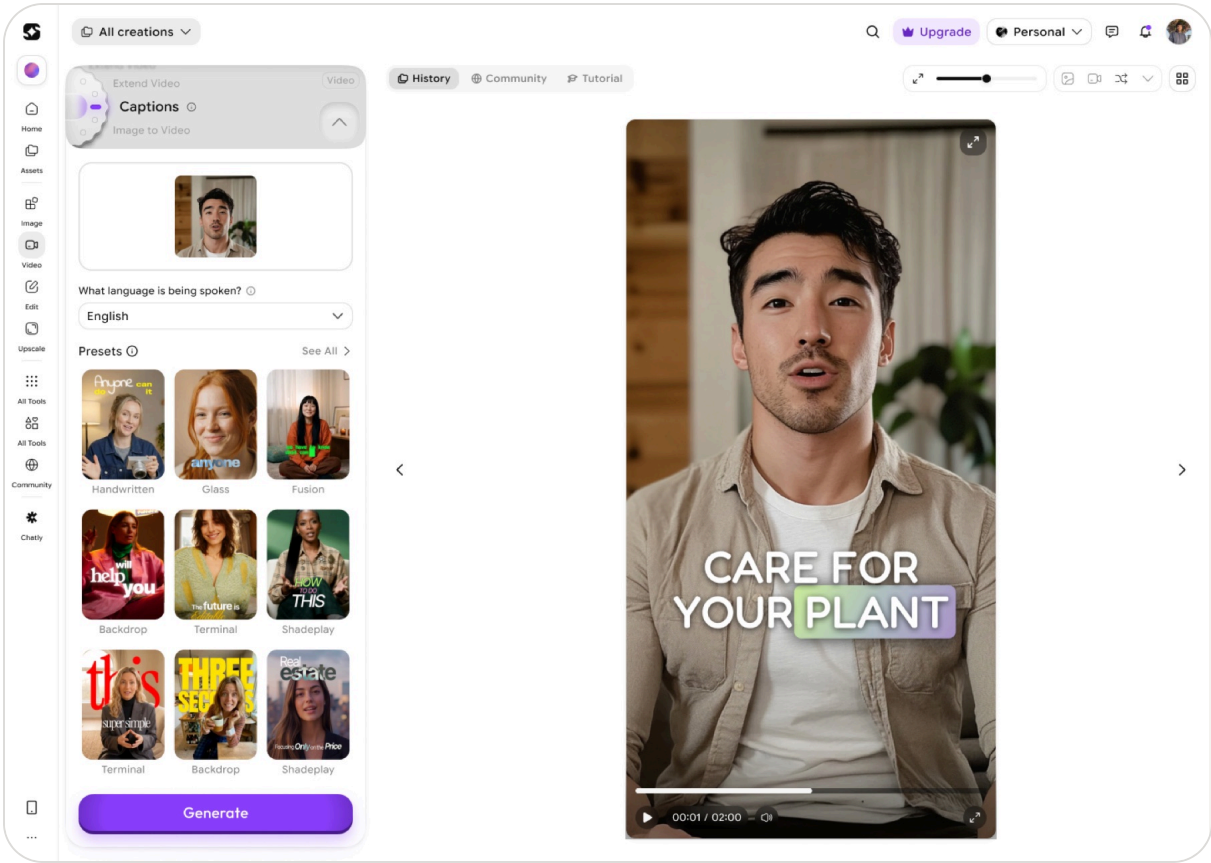

52%

Downloaded it, start to finish

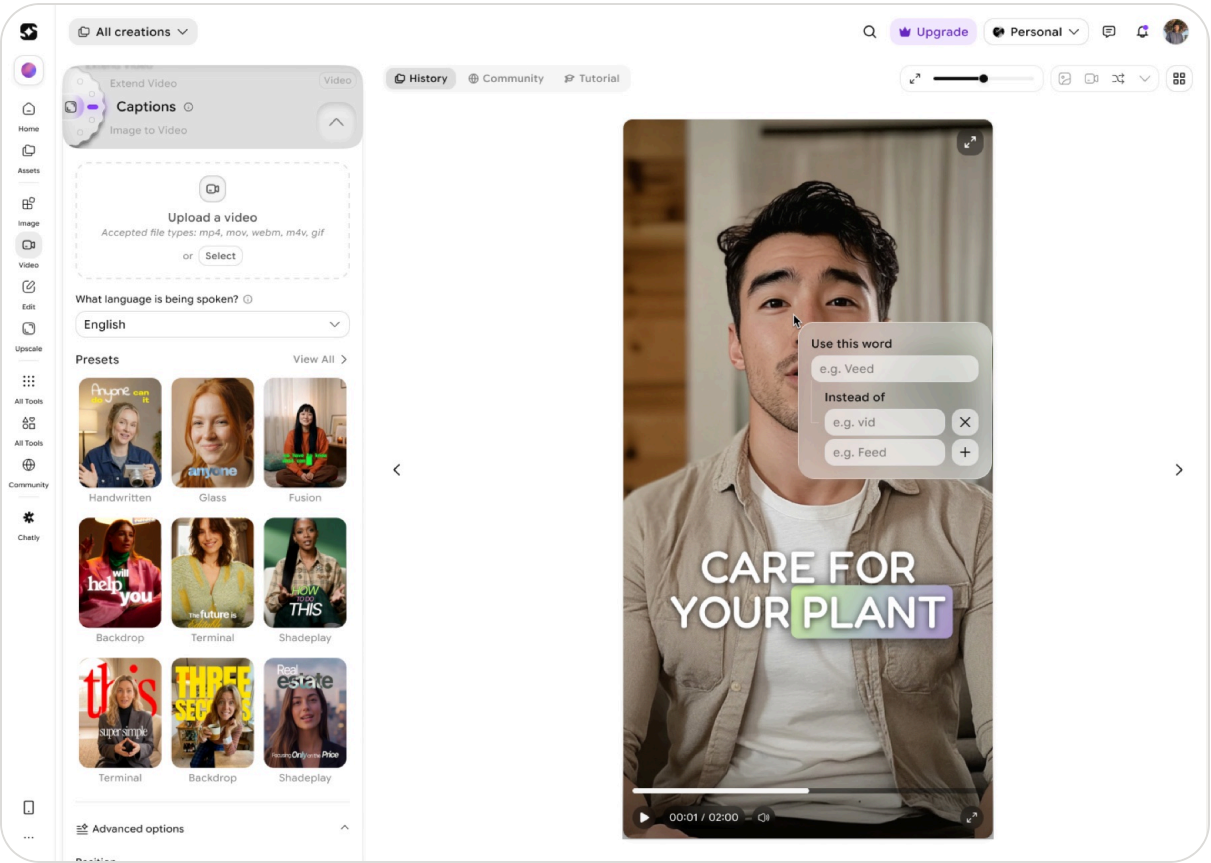

Full case study · hamzajamal.design/work/imagineart-captions

Pick a look by looking. Fix a word, not a timeline.

Styles you can see

Nobody picks a caption style from a list of font names. Every style is a real frame with the captions already on it. Nine on the panel, See All for the rest.

The big decision: no big text editor

The mistakes are almost always a brand, a product or a special term. A word swap fixes those in seconds and took a fraction of the time to build. The obvious fix and the right fix are not always the same size.

Ode to Beauty: a marketplace that reads as a brand

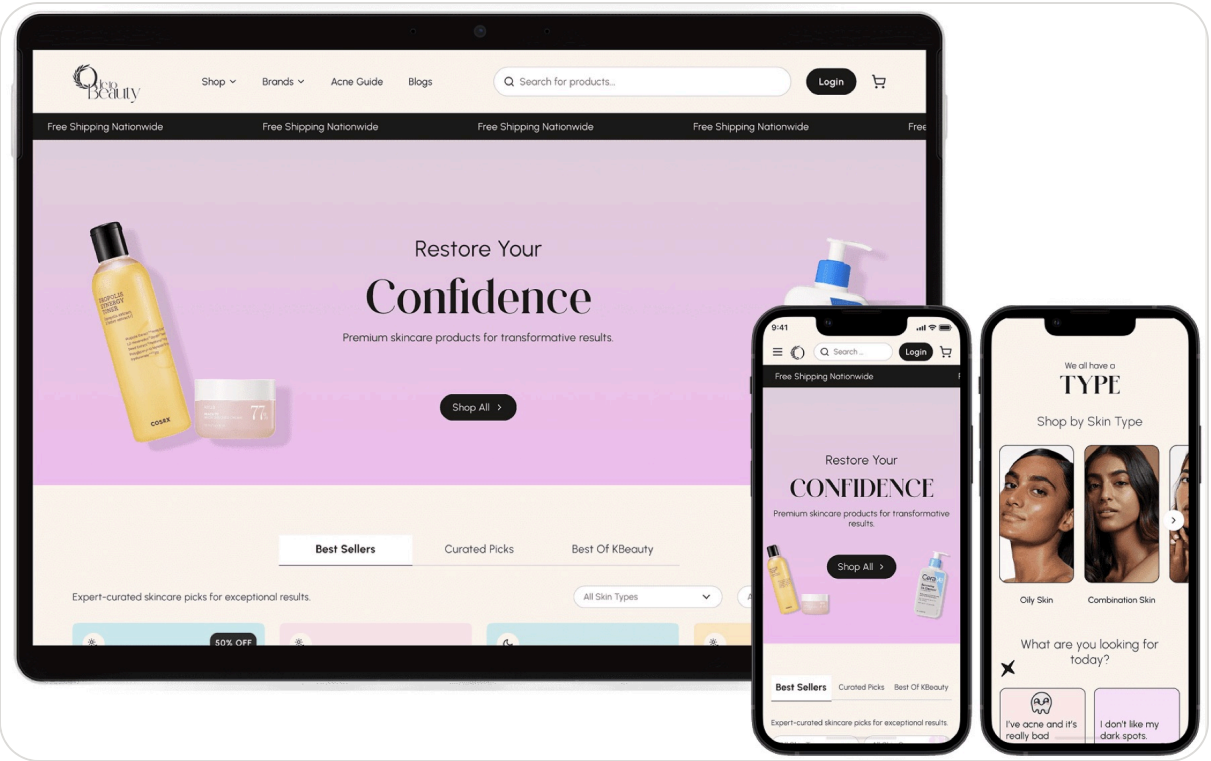

ROLE	TEAM	WHEN	CLIENT
Lead Designer: research, business alignment	Three designers, one PM	Six weeks, 2024	Skincare store in Pakistan, Western brands

THE PROBLEM

Instagram ads worked. The site did not. People arriving from a polished ad landed on a page that looked like any marketplace, and the store's real strength, sorting by skin type and concern, was buried in a menu.

WHAT I DID

- Started from Hotjar heatmaps and analytics, then ran five moderated sessions on the old site as a baseline.
- Fixed the four things people got wrong: hidden skin-type filters, out-of-stock items that looked in stock, icons without labels, dense ingredient lists.
- Put type, colour tokens and components into a small design system so three designers shipped one site.

After. Skin type on the homepage, one clear action per block.

27% to 100%

Task completion, old site to prototype

2 min

To find and buy, down from four

High 80s

Usability score after the redesign

Walter's Hospitality: one system for every vendor

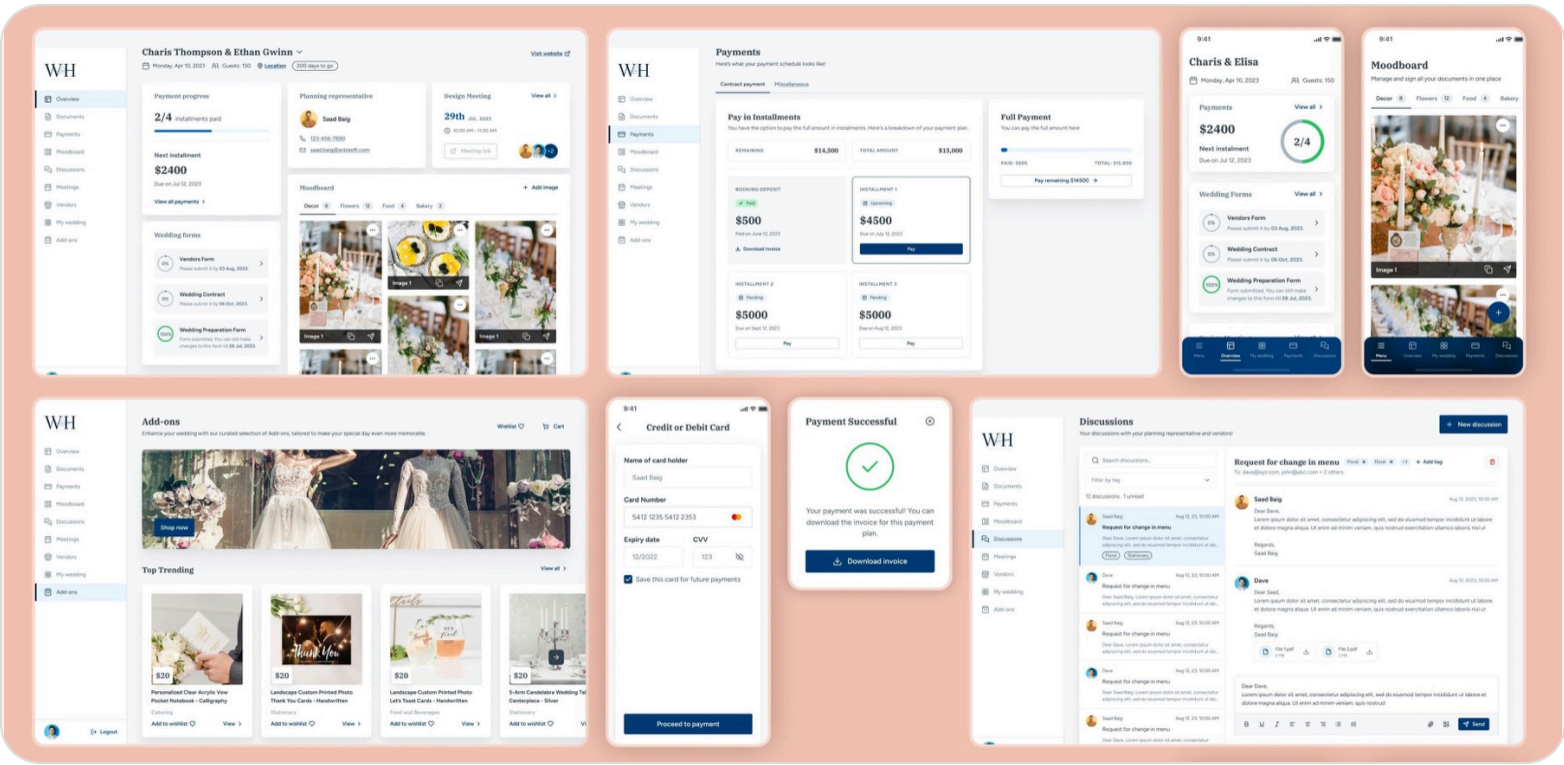

ROLE	TEAM	WHEN	CLIENT
Product Designer: research, flows, portals	Twelve, at Arbisoft	Twelve months, 2023	Events company: weddings, corporate events

THE PROBLEM

Every event lived in five places: a spreadsheet, an email thread, a paper file and two people's heads. Vendor management was the worst of it. Every florist, caterer and photographer was handled a different way, and clients felt the difference.

WHAT I DID

- Interviewed planners, office staff and vendors one at a time, and sat through the four-meeting planning cycle.
- Designed a vendor profile that changes shape by vendor type, so a caterer never fills in a florist's form.
- Built a portal per role, tested each with its own user before build, and a reports page the office had never had.

The platform. Events, vendors and reports in one place.

12 months

From spreadsheets to one shipped system

3 portals

Admin, staff, vendor; each tested

1 profile

That changes shape by vendor type

Advance Learning: ask for less, later

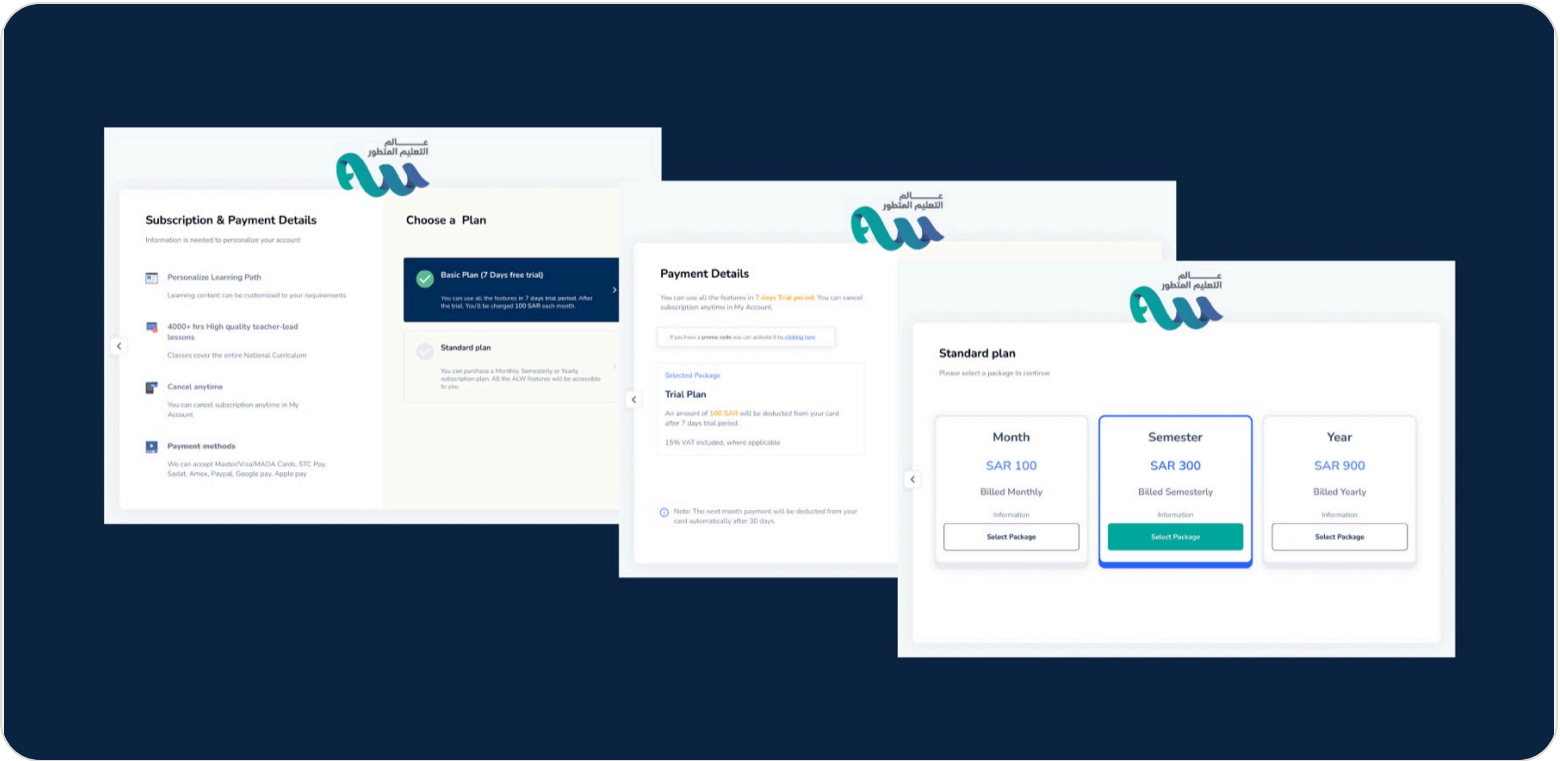

ROLE	TEAM	WHEN	CLIENT
Flows, dashboard, design system	Arbisoft, with the client's engineers	November 2022 to August 2023	The Saudi Embassy

THE PROBLEM

More than half of new students gave up at the sign-up form, and most of the rest never opened a course. We could not talk to students directly, so the evidence came from numbers, relayed quotes and the product. One 13-year-old quit when he saw too many choices.

WHAT I DID

- Cut the sign-up form to what the school needs to create an account and replaced the paywall with a seven-day trial.
- Redesigned the dashboard in two rounds so every state has one next step, with themes by grade level.
- Inventoried every element with the engineers and built the platform's first design system and hand-off docs.

The new sign-up. Essentials only, then a seven-day trial.

1st review

Approved without a second round

7 days

Trial before any payment screen

Dec 2022

Launched, approved January 2023

Xiangqi.com: two lobby redesigns, 1.79% to 11%

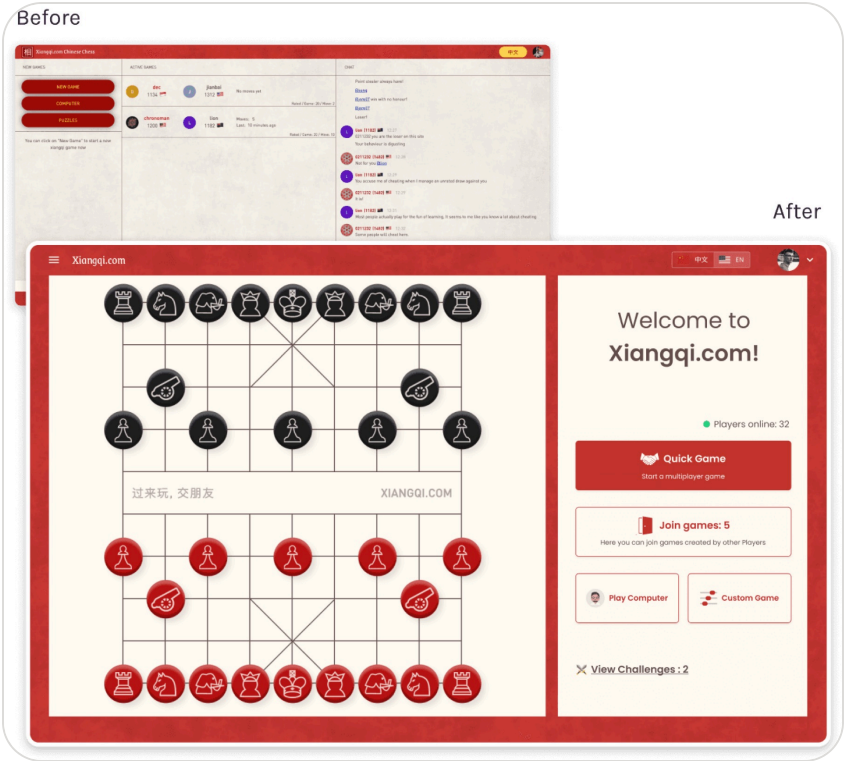

ROLE	TEAM	WHEN	LIVE
Product Designer, research	Eight, at Arbisoft	January 2021 to December 2022	play.xiangqi.com

THE PROBLEM

Only one in five players came back. The business wanted ten times the players in a year. Product decisions had been made by engineers, so the first job was finding out why players left, in a form the product manager could act on.

WHAT I DID

- Added a one-question rating after every game and read the app store reviews of Chess.com, Lichess and TianTian.
- Shipped version 2, then watched four months of heatmaps show an empty lobby outside peak hours and a New Game button nobody saw.
- Version 3 leads with the board, holds up with three players or three hundred, and makes New Game the one obvious action.

Lobby, before and after.

1.79% to 11%

Conversion after version 3

100K

Android downloads on the Play Store

2 redesigns

The second checked against the heatmap

BEYOND THE WORK

Mentoring, talks, and what people say.

I mentor designers on ADPList and am an active member of the design community in Lahore and online. I read, and I share what I learn through talks and presentations.

ADPLIST

Certified mentor

LED

A team of three designers at Carbonteq, with a shared design system

READING THAT SHAPED THE WORK

Never Split the Difference. Sprint. The Design of Everyday Things.

Hamza worked on the product design for Xiangqi, repeatedly exhibiting great problem-solving skills under time pressure. He is creative, a strong communicator, and continually advocates for the best end design and user experience.

Natalia Wojcik
Product, Harvard

Hamza has been a spectacular manager and mentor. He not only taught me a lot, but also empowered me to take ownership of my work and grow with confidence. Hamza creates a safe space to question, challenge, and make mistakes.

Eman Irfan
UX Design, Carbonteq

THANK YOU

Let's talk.

Every project in this document has a full case study online, with the process, the screens and the numbers behind each decision.
